WordPress + Loveable Cheatsheet

1. Set Up WordPress (Back End)

• Create a WordPress site (URL doesn't matter)
• Add posts, pages, media, menus
• Check REST API is working:
– Posts: /wp-json/wp/v2/posts
– Pages: /wp-json/wp/v2/pages
– Menus (v6.8+): /wp-json/wp/v2/menu-locations

Already have a site on your main domain?

• Leave it live for now
• Clone WordPress to a subdomain (e.g. cms.yourdomain.com)
• Use the subdomain as your API source
• Later, point your main domain to the new Loveable site

2. Design with Loveable

• Start a project on Loveable.dev
• Upload design mockups (Figma, screenshot, etc)
• Prompt Loveable to:
– Pull in content from your WP API
– Follow SEO best practices
– Build for accessibility

3. Go Live

Option A:
• Buy a domain directly on Loveable and launch
Option B:
• Sync to GitHub
• Deploy to Netlify or Vercel
• Connect your domain there
